#### SPECIFICATION:

Double pressure gauges (differential) 13352/13353 are produced in compliance with EN837-1 standard. Mainly used for measurements of liquids, vapour and gases that do not have corrosive effect on copper alloys. Double pressure gauges are used in applications, where it is necessary to measure value of two pressures or the difference between two static pressures. One source of pressure measurement, one dial is showing both the values. The main scale shows values of the two static pressures and the sub-scale shows the two pressure difference. Environment temperature -20 up to 60 °C, medium temperature  $T_{max}$  60°C. Other design options on individual request - special scale design, connection threads, switching contacts, front and back flange, etc.
